Hospital patient pathway — strategic BPMN

Readable PDF export · non-executable strategic model (PB-12)

MODEL OF RECORD

Source file	docs/strategic-bpmn/PB-12_strategic-process_2026-09-29.bpmn
Process id	Strategic_Hospital_Pathway
Process name	Hospital patient pathway (strategic)
Executable	no (strategic / non-executable)
Commit	88a5bcc (2026-09-29) · 88a5bcc3621f5163a36e69f3fa70424d733b1c99
File SHA-256	8162a524b455f83c1e1def79c1c876a372a12e51a163d640dd41381a28a5716b
Canvas	2,620 × 1,250 model units
Element summary	14 abstract tasks · 5 exclusive gateways · 1 parallel gateway · 1 start event · 9 end events · 30 sequence flows · 17 message flows · 1 text annotation

SUBMISSION

Deliverable	B-5 — readable PDF exports
Module	UFCEP4-0-3
Group	10
Date	2026-10-19

CONTENTS

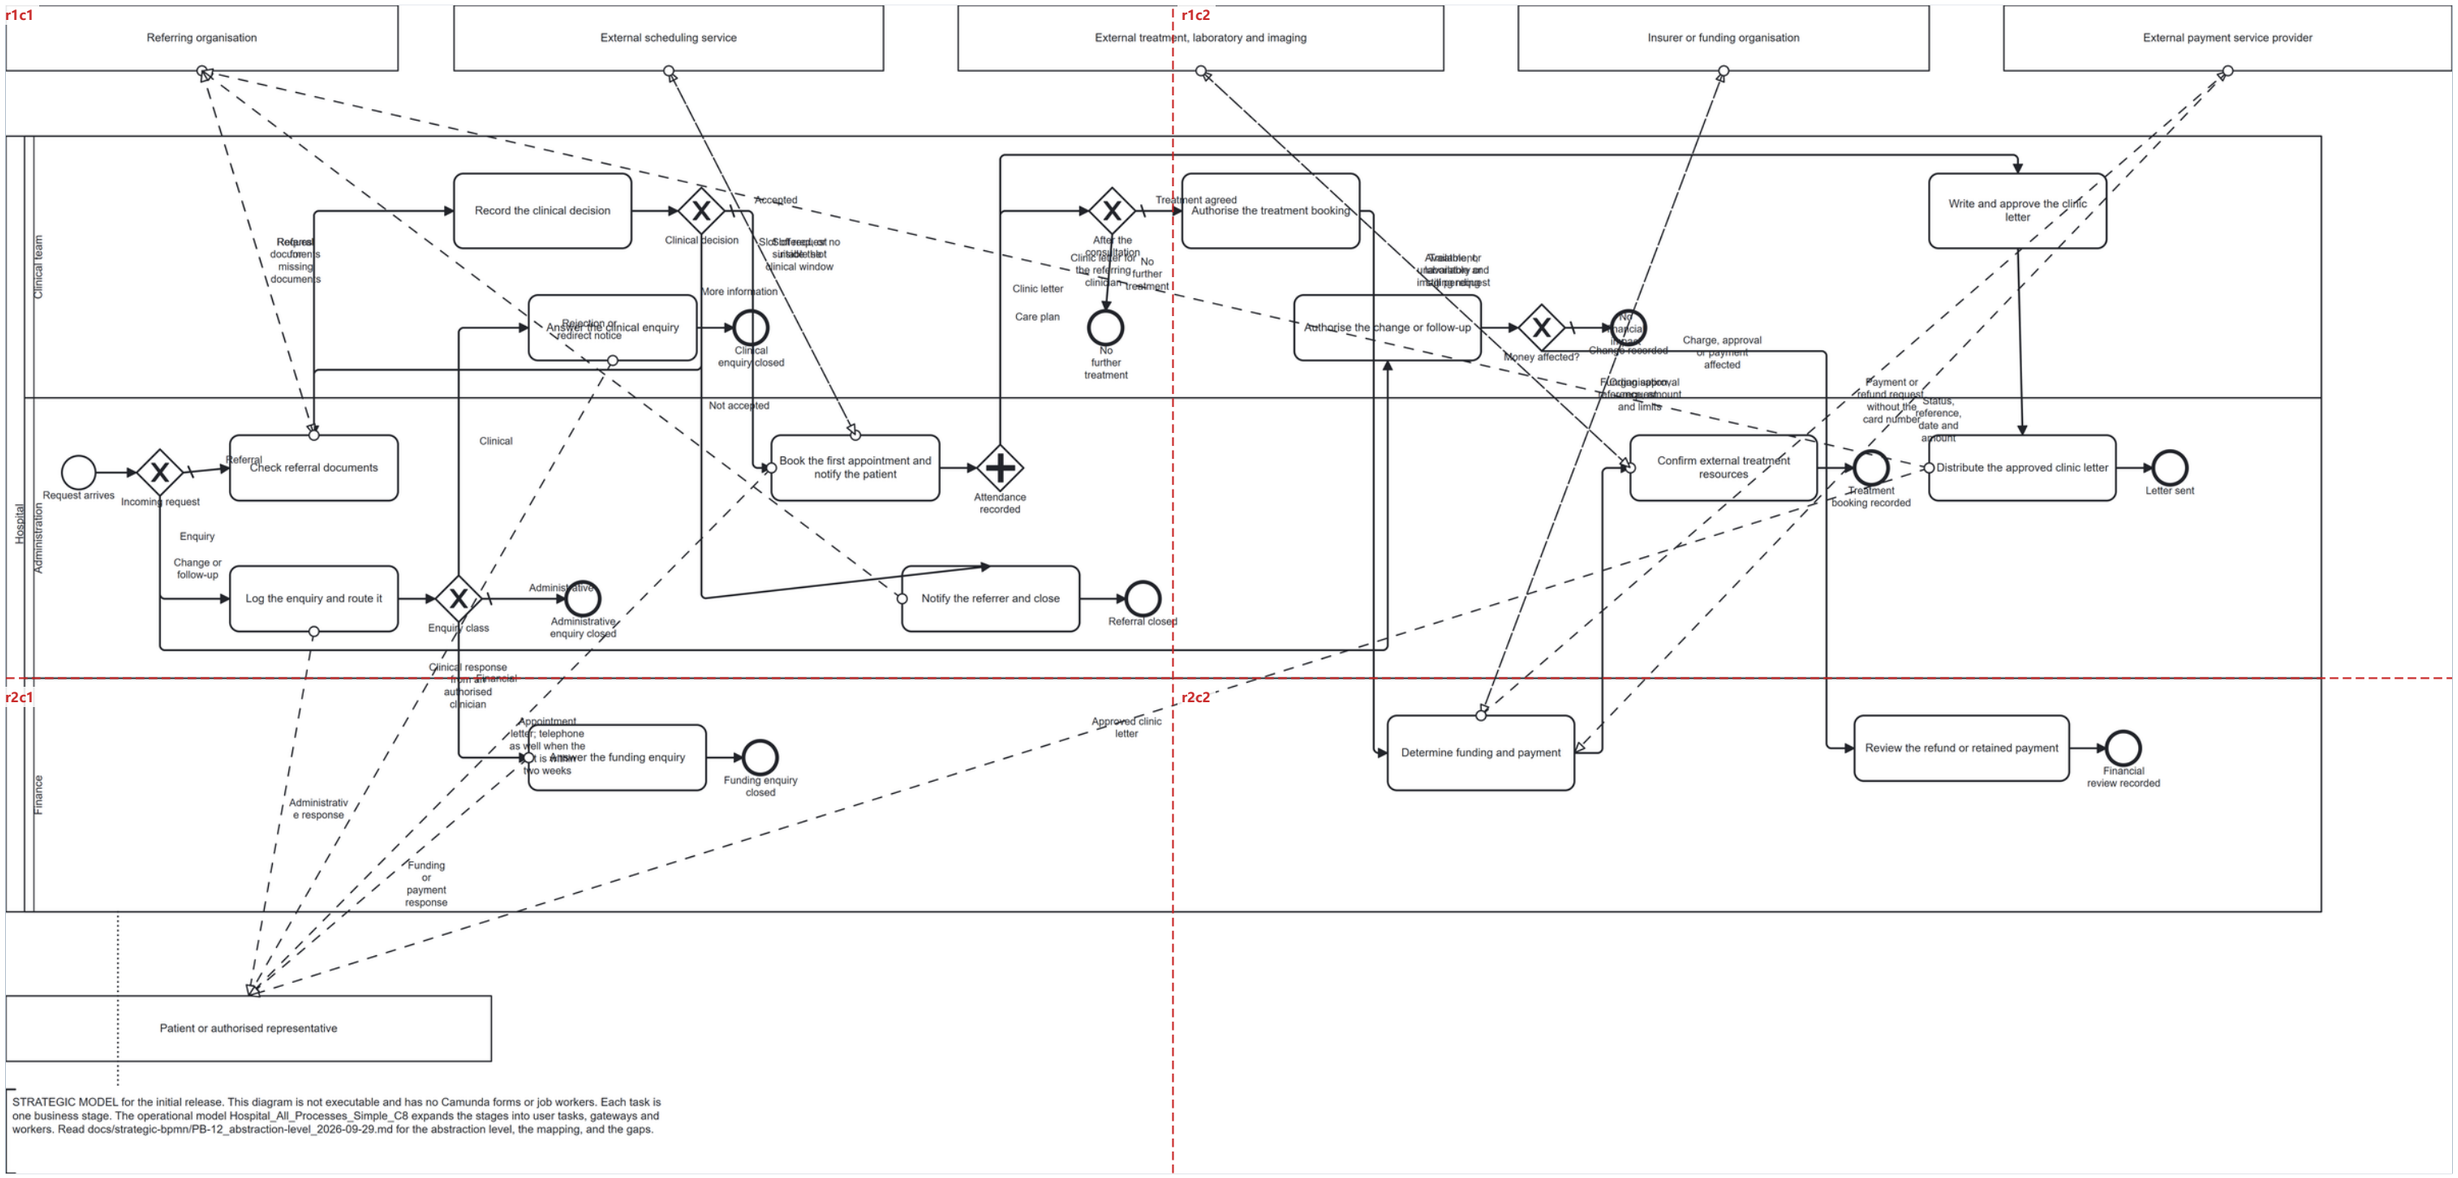

Overview — whole process p2
Strategic model note p4
Legend — BPMN symbols p3
Detail tiles — 2 columns × 2 rows p5

Diagram pages in this export are raster images produced by bpmn-to-image (bpmn-js). Task names, gateway conditions and flow labels are therefore pixel content, not selectable text; this cover, the legend and the notes pages are vector text and can be searched and copied. The 29 September initial-release export (submissions/AISD/Hospital_All_Processes_Camunda8_Export_2026-09-29.pdf) is unchanged by this file.

Strategic BPMN (PB-12) — full process overview

PB-12_strategic-process_2026-09-29.bpmn · process Strategic_Hospital_Pathway · fit to page, not to scale

SHA-256 8162a524b455f83c…

Whole model on one page — detail follows at 0.81× in 2 columns × 2 rows. Dashed grid = tile boundaries.

Legend — BPMN symbols used in this model

Strategic BPMN (PB-12) · counts are taken from the source file

Symbols drawn from the model's own element set

Start event
1 occurrence

The incoming request enters the strategic pathway.

Task (abstract)
14 occurrences

One business stage per task. The model is non-executable: no forms, assignees, job workers or output mappings.

Exclusive gateway (XOR)
5 occurrences

Business choices: incoming kind, clinical decision, after the consultation, enquiry class, money affected.

Parallel gateway (AND)
1 occurrence

Attendance recorded — splits into treatment and letter paths.

End event
9 occurrences

Terminal business outcomes, from referral closed to financial review recorded.

Message flow
17 occurrences

Dashed arrows to and from the black-box participants. These show the external interactions the operational model has to realise.

Sequence flow
30 occurrences

Solid arrows inside the HOSPITAL pool, carrying the business order of stages.

Lane
3 lanes

Clinical team, Administration and Finance — the same three responsibility areas as the operational model.

Pool / participant
7 participants

HOSPITAL plus six black-box participants: referrer, patient, scheduler, care services, funder and payment provider.

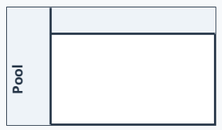

Text annotation
1 occurrence

The strategic-model note reproduced on the next page.

Black-box pool
6 external participants

Referrer, patient, scheduler, care services, funder and payment provider have no internal process: only message flows cross into them.

What this model leaves out
by design

No forms, assignees, job types, timers or conditions — those live in the executable operational model, not here.

This strategic model uses abstract tasks, not Camunda user/service tasks: no forms, job types or assignments are defined in it.

Strategic model note

Reproduced verbatim from the collaboration-level text annotations in the source file

PB-12_strategic-process_2026-09-29.bpmn

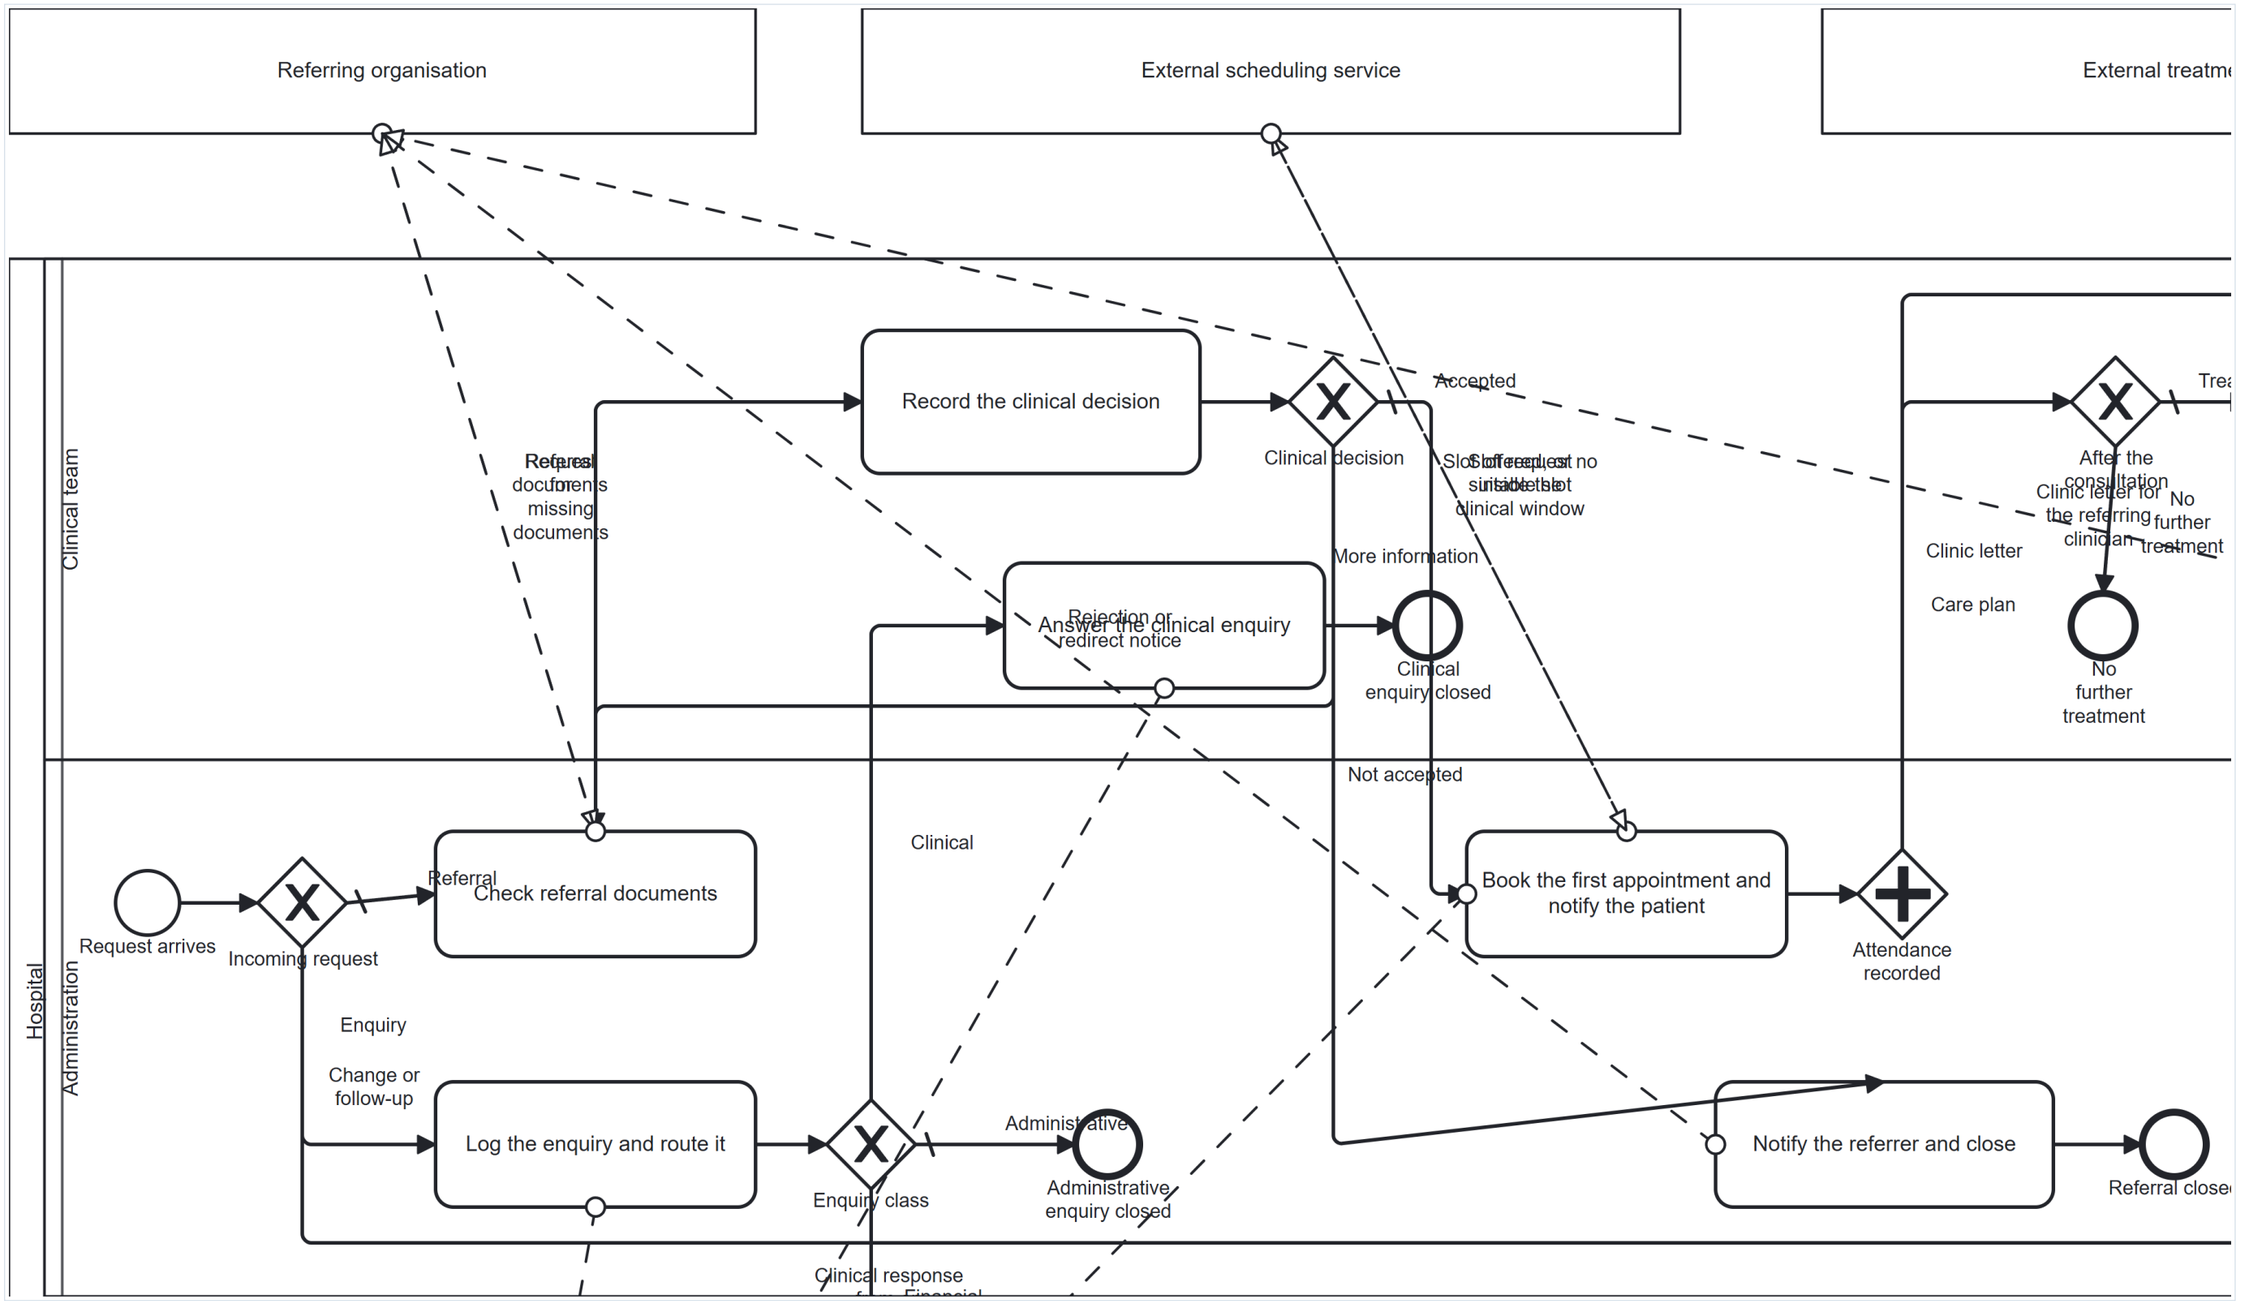

Note on the strategic model

STRATEGIC MODEL for the initial release. This diagram is not executable and has no Camunda forms or job workers. Each task is one business stage. The operational model Hospital_All_Processes_Simple_C8 expands the stages into user tasks, gateways and workers. Read docs/strategic-bpmn/PB-12_abstraction-level_2026-09-29.md for the abstraction level, the mapping, and the gaps.

Strategic BPMN — detail tile r1c1 of 2×2

Pools, Clinical team and Administration lanes · PB-12_strategic-process_2026-09-29.bpmn · process Strategic_Hospital_Pathway · scale 0.81

Region x 70–1,330, y 30–760 (model units) · column 1 of 2

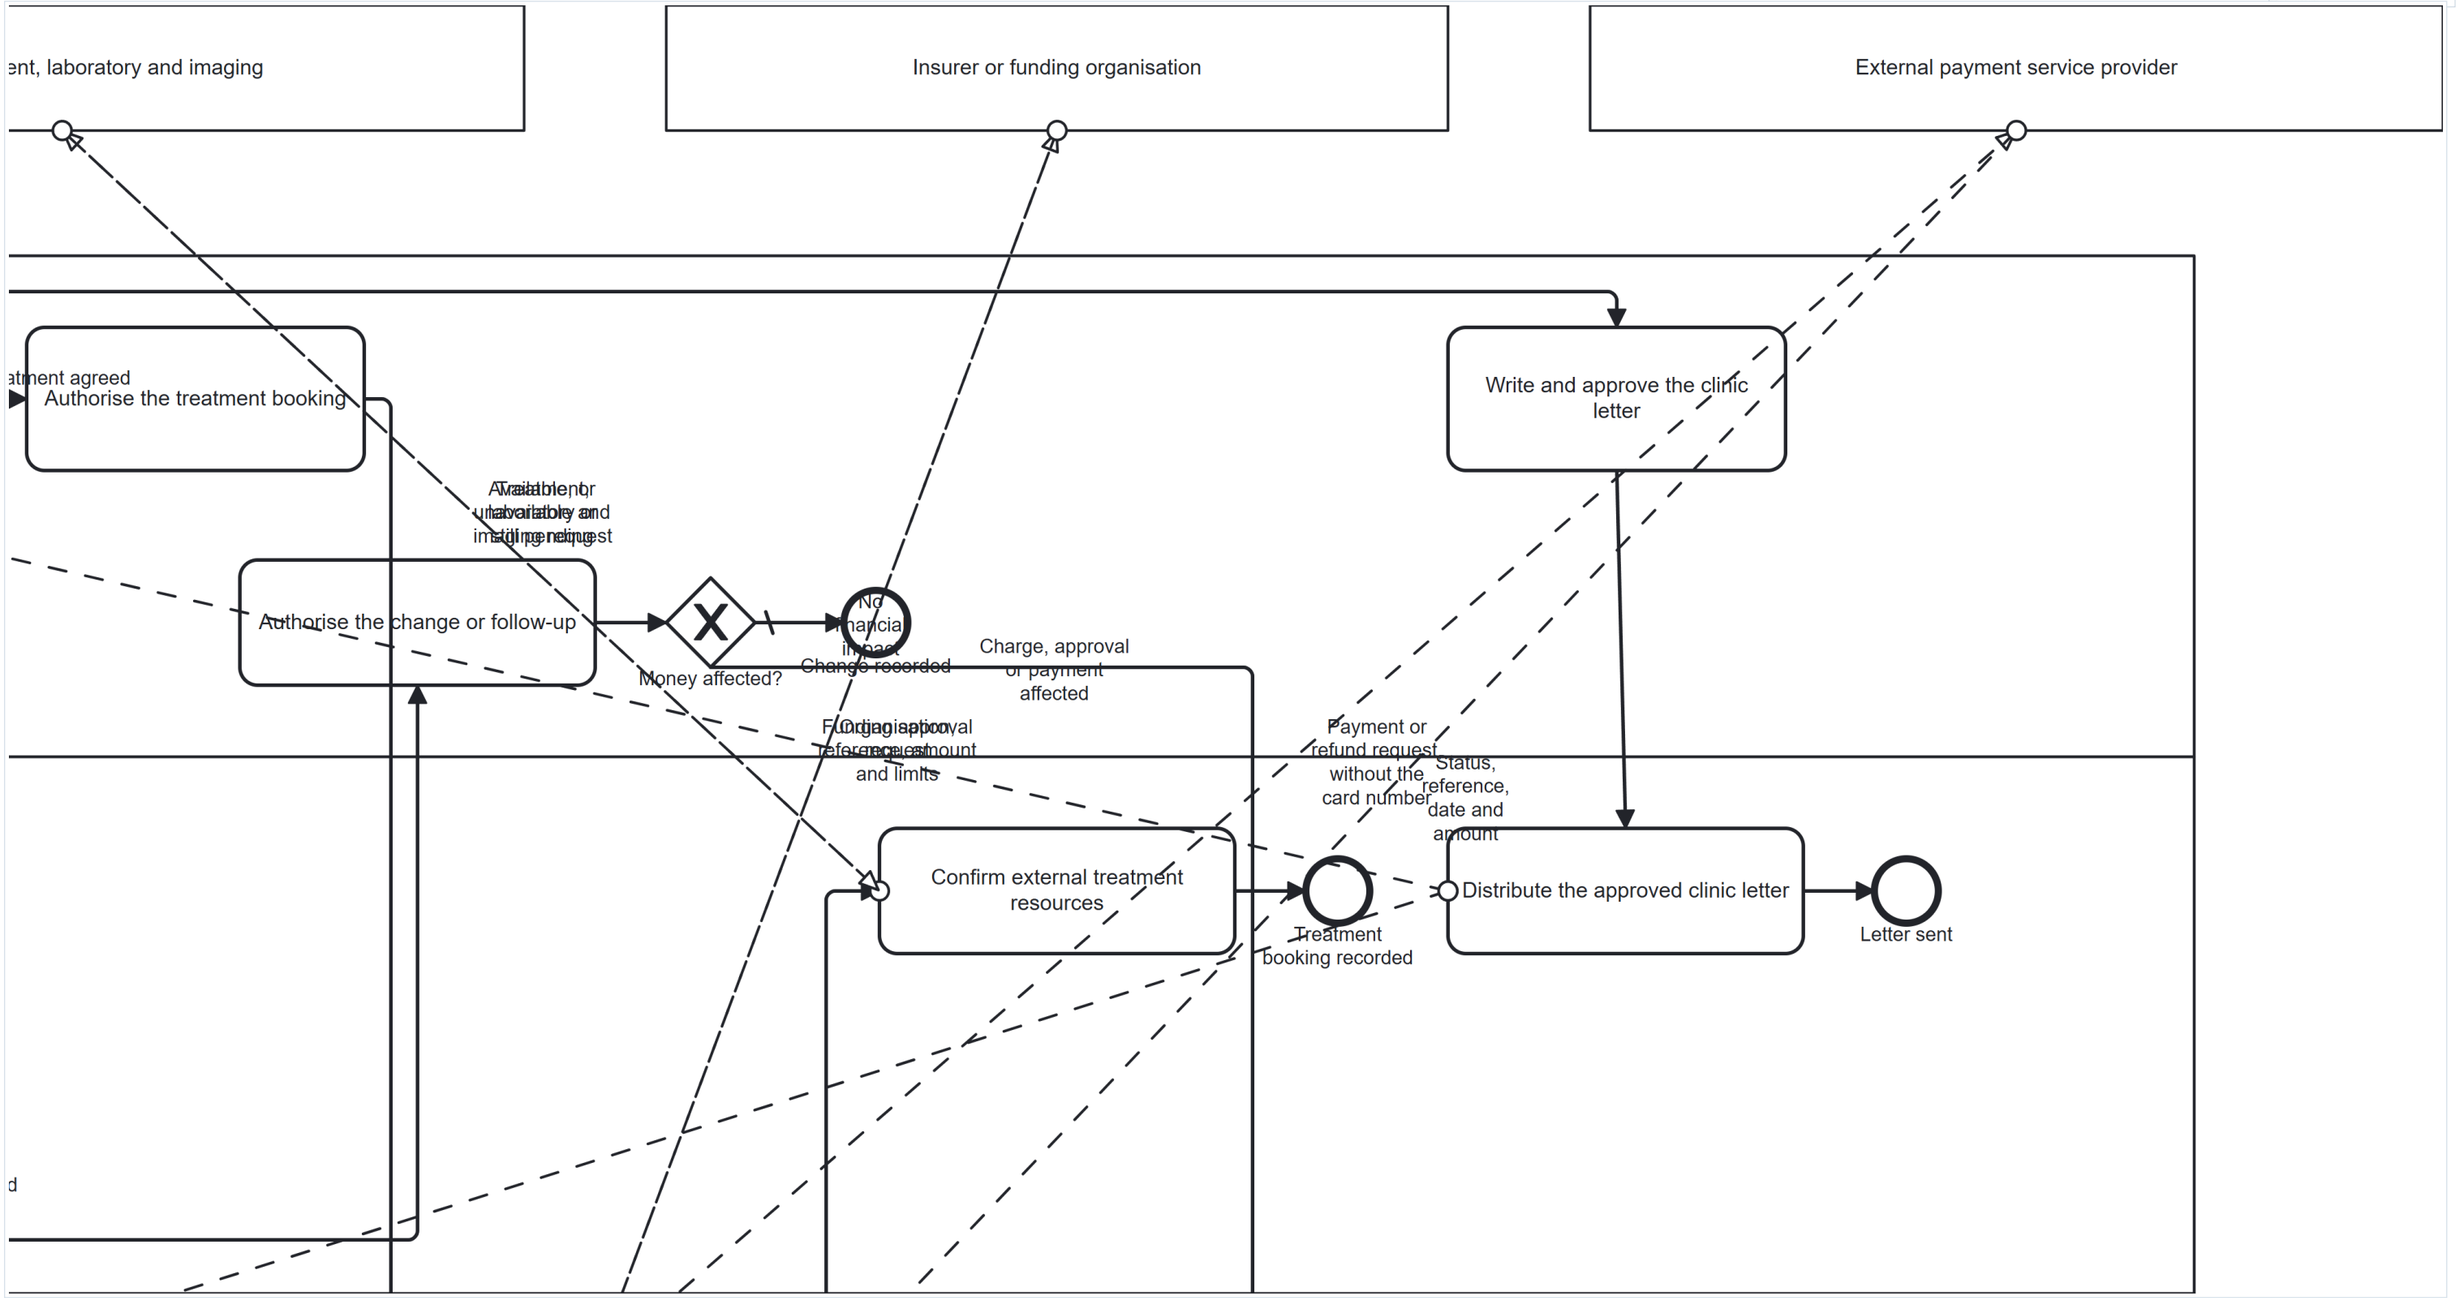

Tile boundaries sit in empty corridors between node boxes; flow lines may continue on the adjacent page. next column → r1c2 · next row ↓ r2c1

Strategic BPMN — detail tile r1c2 of 2×2

Pools, Clinical team and Administration lanes · PB-12_strategic-process_2026-09-29.bpmn · process Strategic_Hospital_Pathway · scale 0.81

Region x 1,330–2,710, y 30–760 (model units) · column 2 of 2

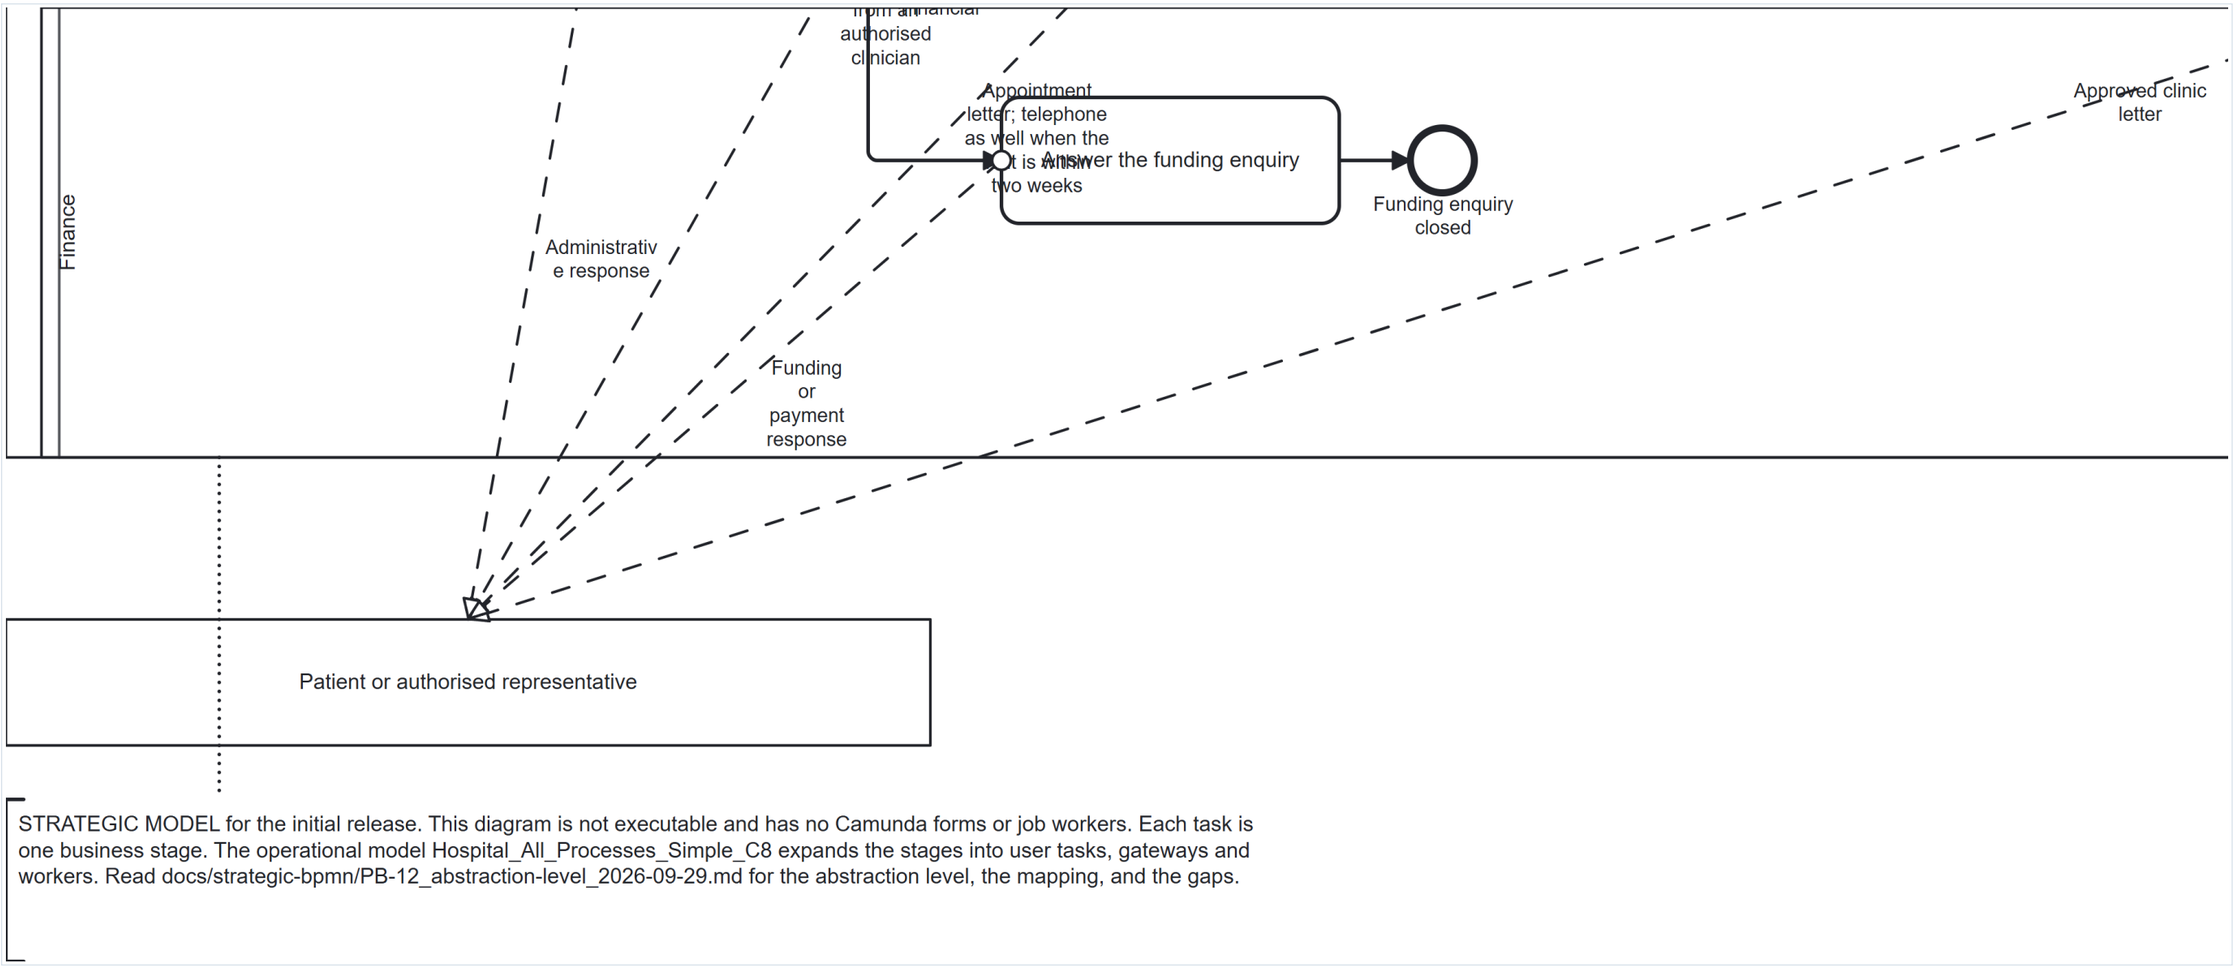

Tile boundaries sit in empty corridors between node boxes; flow lines may continue on the adjacent page. next row ↓ r2c2

Strategic BPMN — detail tile r2c1 of 2×2

Finance lane, patient pool and model note · PB-12_strategic-process_2026-09-29.bpmn · process Strategic_Hospital_Pathway · scale 0.81

Region x 70–1,330, y 760–1,300 (model units) · column 1 of 2

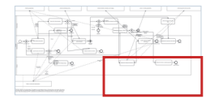

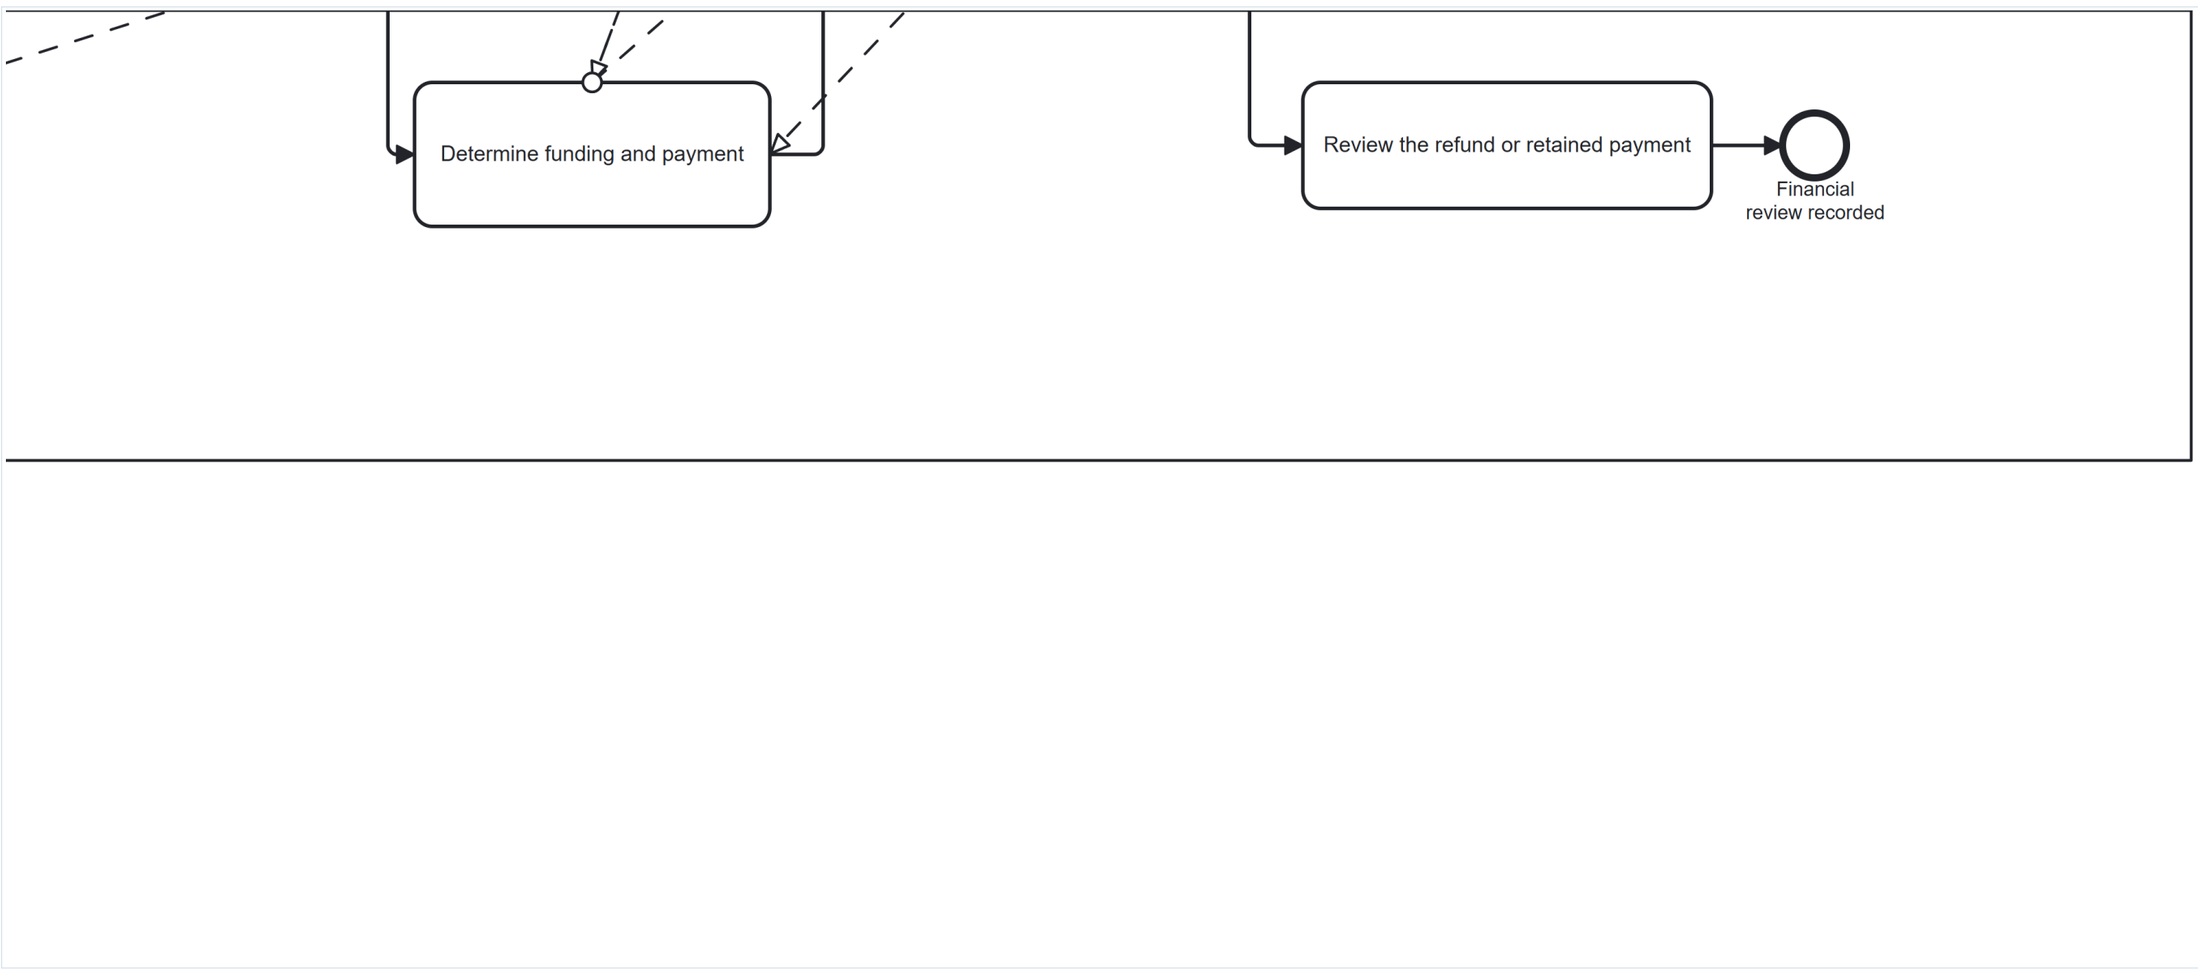

Tile boundaries sit in empty corridors between node boxes; flow lines may continue on the adjacent page. next column → r2c2

Strategic BPMN — detail tile r2c2 of 2×2

Finance lane, patient pool and model note · PB-12_strategic-process_2026-09-29.bpmn · process Strategic_Hospital_Pathway · scale 0.81

Region x 1,330–2,710, y 760–1,300 (model units) · column 2 of 2

Tile boundaries sit in empty corridors between node boxes; flow lines may continue on the adjacent page.
