

READING GUIDE | Blue = main care route (left to right by stage). Grey = side / exception paths kept on lane edges.
Stages: 1 Referral review → 2 Visit & clinical care → 3 Letter & next step → 4 Funding & treatment. Changes sit on the lower clinical band.
All P1-P13 tasks remain visible. Payment uses a send task + payment-result message catch (dist pattern); booking confirmation uses a send task worker. Member B added check-slot, reserve-appointment, flag-resource-unavailable service tasks (Admin lane hang points). Member A added request-refund (after Finance/Adjustment) and mark-payment-investigate (before Funding/issue). External scheduling / correspondence / insurer stay as worker or user-task simulation — no empty white-box pools. Member D adds one notify-care-change service task with a database receipt. Enquiries end after the human response.

BUSINESS CONTROLS | P4: within 2 weeks, also phone and record contact. P9: 7-day letter target; weekly reminders; escalate at 1 and 3 months.
P7: unknown payment confirmation → investigate; never automatically charge again. P8: clinical urgent-care authorisation then Finance follow-up.
P11/P12: formal clinical change first: Finance approves affected payments / refunds. P13: identity, authorised roles and audit apply throughout.
